Morinaga Milk Powdered Formula  
-Analysis of Radioactive Substances-

MORINAGA MILK INDUSTRY CO., LTD. wishes to assure consumers that Morinaga brand powdered formula is free of any radioactive substances. Our products are regularly analyzed at the production facility to confirm that they are safe.

Morinaga produces powdered formula for export, as well as for domestic consumption, at its facility located in Higashi Yamato City, within the Tokyo metropolitan area.

Product for domestic consumption, which comprises the majority of the product produced undergoes analysis. No radioactive matter has been detected (detection limit = 5Bq) in our product. Product for export is made under the same quality control standards and from the same raw materials that are used for manufacture of product for domestic consumption. In addition, the major ingredients for the formula are imported. Again, we assure you that all product is safe.

Since the Great Tohoku Earthquake, Morinaga has taken steps to continue to provide safe product and to avoid radioactive contamination by using raw materials not affected by any radiation and by examining data from government monitoring of air and water quality.

Morinaga will continue to ensure product safety by careful examination of raw materials and environmental factors as well as by conducting product analysis.
